NOTES TO USERS
This map is an integral part of the Flood Insurance Rate Program. It does not represent all the information relevant to the risk of flooding. Additional information should be consulted for possible updates or adjustments to the information contained on this map.

1. The map represents the drainage area bounded by the solid black line on the Flood Insurance Rate Map (FIRM) panel. The map is based on information gathered by Federal Emergency Management Agency personnel, and the FIRM panel is produced by the National Geospatial-Intelligence Agency (NGA). The FIRM panel should be used in conjunction with the FIRM for purposes of administration of the National Flood Insurance Program (NFIP). The FIRM establishes floodplain boundaries that determine eligibility for flood insurance and is the basis for the determination of flood Insurance Rates.

2. The areas on the map that include the highest risk of flooding are shown in black as a base flood plain. The base flood plain and the areas of 1% annual chance floodplain are shown in light blue.

3. For more information on the floodplain boundaries and flood risk, contact your insurance agent or call 1-800-358-9616 for flood insurance quotes and other information.

4. The Federal Emergency Management Agency (FEMA) and the U.S. Army Corps of Engineers (USACE) have worked together to provide this map to the public. To ensure the accuracy of the data, users are encouraged to consult the Flood Profiles and Floodway Data tables for additional information.

5. The map reflects more detailed and up-to-date information than previously available. As a result, the Flood Profiles and Floodway Data tables may reflect areas that are outside the 0.2% annual chance floodplain.

6. Elevation Reference Marks:...
