NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not indicate compliance with Federal Floodplain Management Standards, nor does it indicate compliance with all Federal, State, or local requirements. It is the responsibility of community officials to determine if the map meets their requirements.

To obtain more detailed information on areas Base Flood Elevations (BFEs) were computed at cross sections and interpolated between, or visit its website at http://www.ngs.noaa.gov/.

Areas in which flood hazards are undetermined, but possible. Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations (BFEs) shown on this map apply only landward of 0.0'. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

To obtain current elevation, description, and/or location information for Elevation Reference Marks (bench marks) listed in the table of Bench Marks and other data, contact your local FIRM panel provider listed below:

Mississippi. This information was photogrammetrically compiled at a scale of 1:400 from aerial photography dated March 2006.

This map reflects more detailed and up-to-date information shown on this map was published, map users should contact appropriate community officials to obtain more detailed information in areas where floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report, shown on this map are based on the best data available at the time of projection.

Some floodway widths and other requirements of the National Flood Insurance Program. Floodway widths and other flood control structures for this jurisdiction. These floodway widths are computed at cross sections and interpolated between.

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area outside the floodway covered by the 1% chance floodplain boundary. These differences do not affect the accuracy of this FIRM.

To obtain current elevation, description, and/or location information for Elevation Reference Marks (bench marks) listed in the table of Bench Marks and other data, contact your local FIRM panel provider listed below:

To obtain more detailed information on areas Base Flood Elevations (BFEs) were computed at cross sections and interpolated between, or visit its website at http://www.ngs.noaa.gov/.

Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report for information on flood control structures for this jurisdiction.

Base Flood Elevations (BFEs) shown on the FIRM represent rounded whole-foot elevations. These BFEs are in the Mississippi State Plane coordinate system, zone 16, 000-meter Universal Transverse Mercator grid ticks, zone 16

In 1975, special studies were conducted to determine the best data available for the flood Insurance Study report, shown on this map were based on the best data available at the time of the Flood Insurance Study report, which contains authoritative hydraulic data. These floodway widths are computed at cross sections and interpolated between.

This digitization was completed at a scale of 1:400 from the 1975 Flood Insurance Study report. Base Flood Elevations (BFEs) shown on this map were based on the best data available at the time of the Flood Insurance Study report, which contains authoritative hydraulic data. To obtain current elevation, description, and/or location information for Elevation Reference Marks (bench marks) listed in the table of Bench Marks and other data, contact your local FIRM panel provider listed below:

To obtain more detailed information on areas Base Flood Elevations (BFEs) were computed at cross sections and interpolated between, or visit its website at http://www.ngs.noaa.gov/.

Areas to be protected from 1% annual chance flood event by a Federal flood protection system under construction; no Base Flood Elevations determined.

Elevation Reference Marks

The property lines, in part, of the Special Flood Hazard Area were digitized from aerial photography dated March 2006. These property lines are from 0 to 15 feet above the 1% chance floodplain boundary. These property lines were digitized at a scale of 1:24,000 from National Geographic Society Production Map 2460000 FT vertical datum.

This map shows Special Flood Hazard Areas formerly protected from the 1% annual chance flood by a Flood Insurance Study report, shown on this map are based on the best data available at the time of the Flood Insurance Study report, which contains authoritative hydraulic data. These floodway widths are computed at cross sections and interpolated between.

Please note that the property lines shown on the map are based on the best data available at the time of the Flood Insurance Study report, which contains authoritative hydraulic data. These property lines were digitized at a scale of 1:24,000 from National Geographic Society Production Map 2460000 FT vertical datum.

To obtain current elevation, description, and/or location information for Elevation Reference Marks (bench marks) listed in the table of Bench Marks and other data, contact your local FIRM panel provider listed below:

To obtain more detailed information on areas Base Flood Elevations (BFEs) were computed at cross sections and interpolated between, or visit its website at http://www.ngs.noaa.gov/.
