TURNOVER OR FAILURE OF THIS STRUCTURE IS POSSIBLE, WHICH COULD RESULT IN
DAMAGE TO PERSONS AND PROPERTY BEHIND THESE STRUCTURES. OWNERS BEHIND THESE STRUCTURES ARE ADVISED TO PURCHASE FLOOD INSURANCE EVEN IF THE STRUCTURE IS NOT CURRENTLY SHOWN AS PROVIDING PROTECTION FOR THE 1% ANNUAL CHANCE FLOOD.

WARNING! THIS AREA IS SHOWN AS BEING PROTECTED FROM THE 1% ANNUAL CHANCE FLOOD.

DESOTO COUNTY AND INCORPORATED COMMUNITIES FIRM PANEL LOCATION

FIRM PANEL

Flood Elevations, flood depths, or flood velocities may have been determined.
These BFEs are intended for flood insurance rating purposes only and are not intended to be used for construction or floodplain management purposes when they are higher than the elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management.

Coastal Base Flood Elevations are determined.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988 (NAVD 88). Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map elevations. These BFEs are intended for flood insurance rating purposes only and are not intended to be used for construction or floodplain management purposes when they are higher than the elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management.

Base Flood Elevations (BFEs) are the elevations of water surfaces that have a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area adjacent to a waterway that has a 1% chance of being flooded during the occurrence of the base flood. Base Flood Elevations are the vertical elevations of the water surface at the edges of the Special Flood Hazard Area. Base Flood Elevations for this FIRM are shown in Table 1. For information regarding conversion of elevations to feet, refer to Section 4.1 "Conversion Equations" of the FIRM.
