This map is used in administering the National Flood Insurance Program. It shows the flood hazard area and landward limit of the coastal flood zone with velocity hazard (wave action) for the 1% annual chance flood. Base Flood Elevations (BFEs) shown on the Flood Insurance Rate Map (FIRM) and Flood Insurance Study (FIS) report should be used in conjunction with the FIRM for purposes of construction, development, and flood insurance. The Coastal Flood Zone with Velocity Hazard (Wave Action) represents the approximate landward limit of the 1.5-foot breaking wave. Base Flood Elevations (BFEs) shown on this map apply only landward of 0.0'.

The AE Zone category has been divided by a Transect line A (see map). The A1 transect line lies within the coastal flood zone with velocity hazard (wave action); no Base Flood Elevations are shown on this map. The A2 transect line lies within the Coastal flood zone with velocity hazard (wave action); Base Flood Elevations are shown on this map. The LiMWA represents the approximate landward limit of the 1.5-foot breaking wave. Base Flood Elevations are not shown on this map. The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of obstructions. The floodway study for this jurisdiction is based on the results of the National Flood Insurance Program. The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of obstructions. The floodway study for this jurisdiction is based on the results of the National Flood Insurance Program. Base Flood Elevations of 1.5 feet or more may be shown on the FIRM. These BFEs are rounded to the nearest whole-foot elevation. BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are rounded to the nearest whole-foot elevation. The floodways were based on hydraulic considerations with regard to stream channel configurations. The floodway study for this jurisdiction is based on the results of the National Flood Insurance Program. Base Flood Elevations of 1.5 feet or more may be shown on the FIRM. These BFEs are rounded to the nearest whole-foot elevation. These BFEs are rounded to the nearest whole-foot elevation. The floodways were based on hydraulic considerations with regard to stream channel configurations. The floodway study for this jurisdiction is based on the results of the National Flood Insurance Program. Base Flood Elevations of 1.5 feet or more may be shown on the FIRM. These BFEs are rounded to the nearest whole-foot elevation. These BFEs are rounded to the nearest whole-foot elevation. The floodways were based on hydraulic considerations with regard to stream channel configurations.
