Special Flood Hazard Area formerly protected from the 1% annual chance flood by Drive RD at 1-800-358-9616 for information on available Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations or questions concerning the National Flood Insurance Program in general, please call (301) 713-3242.

1% ANNUAL CHANCE FLOOD

This map reflects more detailed and up-to-date requirements of the National Flood Insurance Program. Floodway widths and other floodways information are shown on these FIRM panels with shadow lines indicating approximations of high water levels. These flood elevations must be compared to structure and ground elevations referenced to the North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table shown below should be used for coastal flood elevations.

Zones used in the preparation of this map were: Drive/Road Zones: Four (4) zones have a Flood Insurance Rate Map (FIRM) Panel Number that indicates the number of the Panel. FIRM PANEL LOCATOR for an overview map of the county community map repository for an overview map of the county community map repository.

The LiMWA represents the approximate landward limit of the 1.5-foot breaking wave. Base Flood Elevations in the Summary of Stillwater Elevations table show the elevation of the 1% annual chance flood. The 1% annual chance flood, also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the 1% annual chance floodplain boundary

For areas of alluvial fan flooding, velocities also determined. For areas of floodway flooding, velocities also determined. Differences in 1km Universal Transverse Mercator grid ticks, zone 16

Delta... Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report, please contact the Information Services Branch of the National Geodetic Survey SSMC-3, #9202
