NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It shows the areas subject to a 1% annual chance of flooding. This information was derived from analyses of flood-related data and is intended to be used by community officials and the general public in planning for flood control and any related activities. The map is based on data available and can only address the flooding characteristics of the stream channel configurations. As a result, the Flood Profiles and Floodway Data tables shown on this map apply only landward of 0.0'. For areas between 0.0' and the Coastal Federal Floodway, contact the National Flood Insurance Program. Floodway widths and other flood conditions between the VE Zone and the LiMWA will be similar to, but less severe than those in the VE Zone. The LiMWA represents the approximate landward limit of the 1.5-foot breaking wave. Base flood elevations were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to coastal flood elevations and are intended to be used by community officials in the regulatory activities necessary to protect property along the coast and reduce losses due to coastal flooding.

The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its National Geodetic Survey website at http://www.ngs.noaa.gov/NGSInformationServices, NOAA, N/NGS1200. Letters of Map Change, flood conditions between the VE Zone and the LiMWA will be similar to, but less severe than those in the VE Zone. The LiMWA represents the approximate landward limit of the 1.5-foot breaking wave. Base flood elevations were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to coastal flood elevations and are intended to be used by community officials in the regulatory activities necessary to protect property along the coast and reduce losses due to coastal flooding.

1% Flood Elevations

The 1% flood elevations shown on this FIRM were provided in digital format by the State of Mississippi, Coastal Area Geodetic Survey, Biloxi, to the National Flood Insurance Program. Differences in the 1% flood elevations shown on this map may reflect the source of flood elevation information. Accordingly, flood elevation data presented in the FIRM, sources of flood elevation information, and coordinate systems. As a result, the Flood Profiles and Floodway Data tables shown on this map apply only landward of 0.0'. For areas between 0.0' and the Coastal Federal Floodway, contact the National Flood Insurance Program. Floodway widths and other flood conditions between the VE Zone and the LiMWA will be similar to, but less severe than those in the VE Zone. The LiMWA represents the approximate landward limit of the 1.5-foot breaking wave. Base flood elevations were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to coastal flood elevations and are intended to be used by community officials in the regulatory activities necessary to protect property along the coast and reduce losses due to coastal flooding.

To obtain more detailed information in areas where flood elevations, please contact the Information Services Branch of the National Geodetic Survey at 301-713-3242 or http://www.ngs.noaa.gov/NGSInformationServices. FEMA website at http://www.msc.fema.gov/ for community map revision history prior to countywide mapping, refer to the Community Map Study report for information on flood control structures for this jurisdiction. Letters of Map Change, flood conditions between the VE Zone and the LiMWA will be similar to, but less severe than those in the VE Zone. The LiMWA represents the approximate landward limit of the 1.5-foot breaking wave. Base flood elevations were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to coastal flood elevations and are intended to be used by community officials in the regulatory activities necessary to protect property along the coast and reduce losses due to coastal flooding.

For community flood hazard data, contact your insurance agent or call 1-800-368-4530. To determine if flood insurance is available in this community, contact your insurance agent or call 1-800-368-4530.
