This map is used in administering the National Flood Insurance Program. It shows the flood hazards that may exist in the community and is a valuable tool to help community officials and homeowners plan for flood hazards and/or minimize potential losses. The flood hazard data used to prepare this map was determined by the Federal Emergency Management Agency (FEMA) and was developed by the National Geodetic Survey. The data shown on this map is based on the best data available at the time of publication. The flood hazard data used to prepare this map was based on the 2008 National Elevation Dataset (NED) created by the National Geographic Survey and related data. The FEMA Map Service Center (MSC) has reviewed the data and provided it to the Flood Insurance Study (FIS) Report for the jurisdiction shown on this map. Additional data, such as revised boundaries and/or elevation information, was reviewed and used in the preparation of this map. For information regarding conversion between the National Elevation Dataset and the National Geodetic Vertical Datum of 1955 (NGVD53), see the U.S. Geological Survey website at http://edc.usgs.gov/nhvs/ or contact the National Geodetic Survey at 877-486-2728.

This map reflects more detailed and up-to-date community-specific floodplains. Floodplains and floodway data are based on National Flood Data Network (NFDN) data. Floodplains and floodway data were adjusted to conform to these new data as appropriate. These differences do not affect the accuracy of this FIRM.

Floodplains were based on the National Flood Data Network and the best data available at the time of publication. The floodplains and floodway data were adjusted to conform to these new data as appropriate. These differences do not affect the accuracy of this FIRM.

The FEMA Map Service Center (MSC) may also be reached by Fax at 1-800-358-9620 and its website at http://www.fema.gov.
