This map is one in a series of maps made available to the public under the National Flood Insurance Program. It shows the 1% annual chance floodplain, determined from flood studies of Hinds county as of 2006. The community may require flood insurance in order to obtain or maintain certain financing, such as mortgage or development permits. The map is intended to help potential developers, lenders, and property owners understand their role in floodplain management and flood insurance.

Flood control structures in the Mississippi Flood Map Modernization Initiative, a joint project of the Federal Emergency Management Agency (FEMA) and the U.S. Geological Survey (USGS), were evaluated to determine their flood control rating. These structures may be used in floodplain management decisions. However, these structures may only be used for future development if the design is certified by the USGS and approved by the USACE.

This map is produced through the Mississippi Flood Map Modernization Initiative, a joint project of the Federal Emergency Management Agency (FEMA) and the U.S. Geological Survey (USGS), to assist communities in implementing the requirements of the National Flood Insurance Program. It shows the 1% annual chance floodplain boundary, determined from the flood studies of Hinds County as of 2006. The map is intended to help potential developers, lenders, and property owners understand their role in floodplain management and flood insurance.
