NOTES TO USERS

This map is to be used in conjunction with the National Flood Insurance Program. It does not represent the official source of flood hazard data for the purposes of the National Flood Insurance Program. The higher of the NFIP-rated flood elevation or the Base Flood Elevation value is used in the rating process. This information was photogrammetrically compiled at a scale of 1:400 from aerial photography and digital elevation models. The data was then processed and edited using the National Flood Insurance Program Base Flood Elevation (BFE) data, which is derived from 1% and 0.2% annual chance flood hazard information supplied by the Federal Emergency Management Agency (FEMA). Additional flood hazard information is available from FEMA. Please refer to the separately printed Flood Insurance Study report (which contains authoritative hydraulic data) for an overview map of the county boundaries of the Special Flood Hazard Areas. For community map revision history prior to countywide mapping, refer to the Community Map Service Center (CMSC) at http://www.msc.fema.gov/. For a list of maps that contain the flood hazard information and Base Flood Elevations, flood depths, or flood velocities shown on this map, see the Flood Insurance Study report. Please contact the National Flood Insurance Program at 1-800-638-6620.

BOUNDARY INFORMATION

Legend

Base Flood Elevations, flood depths, or flood velocities shown on this map represent the highest flood elevation or depth value within the Special Flood Hazard Areas. The elevations or depths represent the height above the North American Vertical Datum of 1988 (NAVD 88) of the water surface elevation during a flood event of either a 1% or 0.2% annual chance flood event. Base Flood Elevations are used in the National Flood Insurance Program for flood insurance rating purposes only and should not be used as the sole basis of flood elevation information. Accordingly, flood elevation data presented in the Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report (which accompanies this FIRM) should be used on insurance applications for the subject property. Flood elevations on this map are referenced to the North American Vertical Datum of 1988. The coastal flood elevations are also provided in the Summary of Stillwater Elevations table. To obtain current elevation, description, and/or location information for product associated with this FIRM, available products may include previously issued Base Flood Elevations (BFEs) shown on the FIRM represent rounded whole-foot elevations. These BFEs are shown upon the Floodway Data tables. As a result, the Flood Profiles and Floodway Data tables were transferred from the previous FIRM may have been adjusted to conform to these new stream channel distances that differ from what is shown on this map. Floodway boundary is determined by floodway analysis. The Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report (which accompanies this FIRM) should be used for construction and/or floodplain management purposes. The Base Flood Elevation value where uniform within zone; elevation used in the preparation of this map was State Plane Mississippi West FIPS 33 0025 or contact the National Geodetic Survey website at http://www.ngs.noaa.gov/.

FIRM products associated with this FIRM. Available products may include previously issued Base Flood Elevations (BFEs) shown on the Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report (which accompanies this FIRM). Users should be aware that certain areas not in Special Flood Hazard Areas may be protected by floodwalls, natural barriers, or other physical features. This information was photogrammetrically compiled at a scale of 1:400 from aerial photography and digital elevation models. The data was then processed and edited using the National Flood Insurance Program Base Flood Elevation (BFE) data, which is derived from 1% and 0.2% annual chance flood hazard information supplied by the Federal Emergency Management Agency (FEMA). Additional flood hazard information is available from FEMA. Please refer to the separately printed Flood Insurance Study report (which contains authoritative hydraulic data) for an overview map of the county boundaries of the Special Flood Hazard Areas. For community map revision history prior to countywide mapping, refer to the Community Map Service Center (CMSC) at http://www.msc.fema.gov/. For a list of maps that contain the flood hazard information and Base Flood Elevations, flood depths, or flood velocities shown on this map, see the Flood Insurance Study report. Please contact the National Flood Insurance Program at 1-800-638-6620.

Base Flood Elevations, flood depths, or flood velocities shown on this map represent the highest flood elevation or depth value within the Special Flood Hazard Areas. The elevations or depths represent the height above the North American Vertical Datum of 1988 (NAVD 88) of the water surface elevation during a flood event of either a 1% or 0.2% annual chance flood event. Base Flood Elevations are used in the National Flood Insurance Program for flood insurance rating purposes only and should not be used as the sole basis of flood elevation information.
