Areas determined to be outside the 0.2% annual chance floodplain. 

Based on historical data and evidence compiled in the Flood Insurance Study report, which contains authoritative hydraulic data, Floodway Data tables are provided listing pertinent floodway data. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent communities will necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The Flood Profiles and Floodway Data tables are provided for this community to verify current corporate limit locations.

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average flood heights.

Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths 1,000 feet.

Coastal flood elevations are also provided in the Summary of Stillwater Elevations table for this community when they are higher than the elevations shown on this FIRM.

To determine if flood insurance is available in this community, contact your insurance agent or call the Flood Insurance Rate Map Number associated with this FIRM. Available products may include previously issued Flood Insurance Rate Maps and related documents. For a list of FIRMs currently available for all communities within your state, please contact your insurance agent or call 1-800-358-9616.
