The map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of floodwater, or all areas subject to erosion or wave action by coastal floodwaters.

The map shown on this panel is the updated Mississippi Flood Insurance Rate Map (FIRM) of Lamar County, Mississippi. This map was prepared in conjunction with the Mississippi Flood Map Modernization Initiative, a project sponsored by the Federal Emergency Management Agency (FEMA). The map is based on flood hazard data and geographic information developed at the scale of 1"=500' for the Study area shown on this panel. The base map, base year flood data, and geographic information used in the preparation of this map were acquired from the U.S. Geological Survey's 1-meter National Elevation Dataset, the U.S. Fish and Wildlife Service's National Wetlands Inventory data, the U.S. Army Corps of Engineers' Federal Flood Control Project data, and the Mississippi State Plane Coordinate System 1983 coordinates.

This map is for use in determining the Base Flood Elevations (BFEs) and flood hazards. BFEs are needed for determining the flood insurance premium rates for individual properties in accordance with the National Flood Insurance Program. Flood hazards are needed for identifying the types of floodplains and floodways in which potential flood losses may occur. For additional information about flood insurance, contact the National Flood Insurance Program at 1-800-358-9616.

For information about the flood protection provided by existing flood control structures, contact the State Flood Control Agency. The Flood Protection District of Southern Mississippi can be contacted at 1-877-336-2627. For information about the flood protection provided by local flood control structures, contact your local flood control district.

If you have questions about this map or its purpose, contact the Mississippi Flood Insurance Program at 1-800-358-9616.
