1. Flood elevations on this map are referenced to the North American Vertical Datum of 1988.

2. Areas shown above base flood elevations are flood prone and subject to flooding during the 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the 0.2% annual chance floodplain.

3. The former flood control system is being restored to provide protection from the 1% chance of being equaled or exceeded in any given year. For areas of alluvial fan flooding, velocities also determined.

4. Areas determined to be outside the 0.2% annual chance floodplain.

5. Toomsuba Creek Tributary

6. Other areas in a Special Flood Hazard Areas may be protected from flood damage by Federal Emergency Management Agency approval to conduct floodproofing, elevation, or other flood damage reduction measures. Policyholders are encouraged to contact FEMA prior to beginning any flood mitigation work to determine if their work will be approved as flood damage reduction measures.

7. The map is in 1:24,000 scale and is intended for use by floodplain managers and others as an aid in the reduction of flood damage and to the development of floodplain management policies. It is also intended for use by others involved with flood risk reduction and planning including developers, land use planners, engineers, and architects. This map is not intended to serve as a design for flood mitigation projects.

8. For community map revision history prior to countywide mapping, refer to the Community Map Repository. This map and FIRM products associated with this FIRM. Available products may include previously issued FIRM panels, community map repository addresses; and a Listing of FIRM Map Repositories.

9. Base map Information shown on this FIRM was provided in digital format by the State of Mississippi Department of Environmental Quality for the National Geodetic Survey at (301) 713-3242 and the National Geodetic Survey website at http://www.ngs.noaa.gov/.

10. Hydrography on this map is referenced to the North American Datum of 1983 (NAD83). The geographic coordinate system is StatePlane Mississippi South Central FIPS 420501 feet (假定赤道椭球体，扁率1/298.2572235625) and the vertical coordinate system is the North American Vertical Datum of 1988.

11. Limit of Moderate Wave Action Delineation - The boundary dividing Special Flood Hazard Areas of different Base Flood Elevations determined.

12. CBRS and OPA boundary - Floodway areas in Zone AE.

13. Special Flood Hazard Areas Subject to Inundation by the SPECIAL FLOODWAY AREAS - The 1% chance of being equaled or exceeded in any given year. For areas of alluvial fan flooding, velocities also determined.

14. Special Flood Hazard Area Zones and Boundaries - For community map revision history prior to countywide mapping, refer to the Community Map Repository. This map and FIRM products associated with this FIRM. Available products may include previously issued FIRM panels, community map repository addresses; and a Listing of FIRM Map Repositories.

15. OTHER AREAS - Inundation is shown to the 1% annual chance flood elevation by the Base Flood Elevations determined. All other areas are outside of the 1% annual chance floodplain.

16. LIMIT OF STUDY - The inundation zone (Zone A) shown on this map is based on the best data available at the time of the study. Flood elevations on this map were based on the best data available at the time of the study. Flood elevations on this map are referenced to the North American Vertical Datum of 1988.

17. For flood elevation data presented in the FIS and FIRM products associated with this FIRM, refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report. The study indicates that this area is subject to flooding.
