Questions about this map were computed at cross sections and interpolated between.

A flood control levee system does not comply with Section 65.10 requirements by (month, day, year). If the community or owner believes the levee system does not comply with Section 65.10 requirements by (month, day, year), they should contact the Federal Emergency Management Agency (FEMA) to receive Letters of Map Change, a Flood Insurance Study report, and/or digital versions of floodway areas in Zone AE.

To mitigate flood risk in residual risk areas, property owners and residents are encouraged to consider flood insurance and floodproofing or other protective measures.

The floodplains and floodways that were shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were shown on this map were computed at cross sections and interpolated between.

Deviations from the FIRM include stream channel distances that differ from what is shown on this map. Stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report for this jurisdiction. Certain areas not necessarily identify all areas subject to flooding, particularly from local drainage sources of runoff.

The flood elevations on this map are referenced to the North American Vertical Datum of 1988. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent communities may result in slight positional difference of map layers across jurisdictions.

For additional information on flood control structures for this jurisdiction, refer to the separately printed National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

NOTES TO USERS

The map uses the following National Geodetic Survey (NGS) referenced North American Datum of 1988 (NAD83), National Geodetic Vertical Datum of 1988 (NGVD88), and North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table.

BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are not necessarily the final values that will be used for construction and/or floodplain management purposes. The flood elevations on this map are referenced to the North American Vertical Datum of 1988. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent communities may result in slight positional difference of map layers across jurisdictions.

The levee system shown on the FIRM are Federal Emergency Management Agency (FEMA) provisionally accredited. Overtopping or failure of any levee system is possible. For additional information on flood control structures for this jurisdiction, refer to the separately printed National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.
