This map was produced through the Mississippi Flood Map Modernization Initiative. It does not show the true elevation of any floodplain features, including infrastructure, land, and water bodies. It does reflect the true horizontal location of these features. For questions about this map, contact your insurance agent or call (301) 713-3242.

These flood elevations must be compared to structure and ground elevations referenced to the North American Vertical Datum of 1988. Flood elevations on this map are referenced to the North American Vertical Datum of 1988. This information was photogrammetrically compiled at a scale of 1:400 from Base map (301) 713-3242.

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of obstruction. The floodway is delineated on the map as a horizontal boundary dividing Special Flood Hazard Areas of different Base Flood Elevations. The floodway is based on hydraulic considerations with regard to certain areas not in Special Flood Hazard Areas may be protected by floodplain management.

For information regarding conversion between the National Geodetic Vertical Datum (NGVD 29) and the North American Vertical Datum of 1988 (NAVD 88), please contact the Geodetic Survey at the following address:

To determine if flood insurance is available in this community, contact your insurance agent or call (301) 713-3242.

In some cases, the flood elevations on this map may reflect the former flood control system in operation. In these cases, the flood elevations on this map may or may not reflect the true elevation of the flood control structures. The flood elevations on this map are accurate if the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
