NOTES TO USERS

The map was produced through the Mississippi Flood Map Modernization Initiative, a project funded by the Federal Emergency Management Agency (FEMA), in conjunction with the Mississippi State Board of Engineers. This map assigns flood risk by flood zone, floodway, and floodplain to the appropriate ground elevations. The information on this map represents an approximation of the flood risk in the area shown. The flood elevations are based on the best data available at the time of the Flood Insurance Study report (which contains authoritative hydraulic data) and may reflect differences from the datum used in past studies. 

Lack of flood-related information in some areas may reflect Base Flood Elevations (BFEs) and/or Coastal Base Flood Elevations (CBEs) that were determined during a flood insurance study (FIS) or in accordance with the Coastal Flood Study for this jurisdiction. These flood elevations must be compared to structure and ground elevations referenced to the North American Vertical Datum of 1988. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the Geodetic Survey at http://www.ngs.noaa.gov/.

To obtain current elevation, description, and/or location information for coastal structures or flood control structures, contact the National Flood Insurance Program at 1-800-638-6620. For additional information on available products associated with this FIRM, visit its website at http://www.fema.gov/business/nfip/.

Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

LIMITED FIRM PANEL INFORMATION change at GLO/USGS/WAP, LID 07/10/3/13, is applied. Effective date of change is 07/13/13. The FIRM panel is effective on 07/10/13. Contact the FIRM panel information change at GLO/USGS/WAP, LID 07/10/3/13, for further information on this change.

This panel contains information on base flood elevations (BFEs) and flood zones. This information was obtained from FEMA's National Flood Insurance Program (NFIP) database. BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are shown in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management. Elevations shown on this map apply only landward of 0.0'.

For community map revision history prior to countywide mapping, refer to the Community Map Revision History list on the Community Map Index. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the Geodetic Survey at http://www.ngs.noaa.gov/.

Base Flood Elevations, flood depths, or flood velocities may reflect differences from the datum used in past studies. These differences do not affect the accuracy of this FIRM.

For additional information on available products associated with this FIRM, visit its website at http://www.fema.gov/business/nfip/.
