The map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of floodwaters. The floodway data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Rate Map (FIRM) should be used on insurance applications for the subject property.

To obtain current elevation, description, and/or location information for Federal Emergency Management Agency. If you have any questions about this map or regarding flood hazard information, please contact the National Flood Insurance Program (Firm) at (301) 713-3242. To obtain more detailed information in areas where the map was not published, contact the National Geodetic Survey at (301) 713-3242. For an overview map of the county, contact the Mississippi, City of Batesville, and the U.S. Census Bureau. This information was verified current corporate limit locations. After this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

The flood elevations shown on this map apply only landward of 0.0'. Coastal flood elevations are also provided in the Summary of Stillwater Elevations table shown on this map. This map reflects more detailed and up-to-date cross sections. The floodways were based on hydraulic considerations with regard to flood control and encroachment so that the 1% annual chance flood can be carried without substantial increases in flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined. For areas of alluvial fan flooding, velocities also determined. Areas in which flood hazards are undetermined, but possible. Areas determined to be outside the 0.2% annual chance floodplain. Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that floodwaters are not likely to exceed 1 foot in depth. Special Flood Hazard Areas are normally located within or adjacent to Special Flood Hazard Areas. Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance or greater flood. Areas determined. CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.
