NOTES TO USERS

The map is for use in administering the National Flood Insurance Program. It does not constitute an official determination of flood hazards or flood insurance rates. The map is subject to revision in the future. Use of this map is authorized by the U.S. Government and the State of Mississippi. The map is not intended for navigational use.

To determine if flood insurance is available in this community, contact your insurance agent or call 1-800-638-6620. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and North American Vertical Datum of 1988 (NAVD 88), contact the National Oceanic & Atmospheric Administration at 1-800-433-1342 or visit the U.S. Army Corps of Engineers Website at www.usace.army.mil/is/ or contact the National Flood Insurance Program at 1-800-359-5845.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

Other areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for the jurisdiction for information on flood control structures for this jurisdiction.

Coastal flood zones are designated as Zone A, Zone A99, Zone AR, and Zone VE. Zone A indicates that the 1% annual chance flood is on or near the land surface. Zone A99 indicates that the 1% annual chance flood is on or near the land surface and the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone VE indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified.

Zone VE indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone VE indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone A99 indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified.

Zone A indicates that the 1% annual chance flood is on or near the land surface. Zone A99 indicates that the 1% annual chance flood is on or near the land surface and the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone VE indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the area is protected from the 1% annual chance flood by a flood control system that was subsequently decertified.

1% ANNUAL CHANCE FLOOD

Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths:

- Zone A: 1 to 3 feet
- Zone A99: 1 to 3 feet
- Zone AR: 1 to 3 feet
- Zone VE: 1 to 3 feet

For areas of alluvial fan flooding, velocities also determined.

Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified.

Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations:

- Zone A: Base Flood Elevations
- Zone A99: Base Flood Elevations
- Zone AR: Base Flood Elevations
- Zone VE: Base Flood Elevations

These depths are based on the National Geodetic Vertical Datum of 1929. The above flood elevation information is intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Base Flood Elevations value where uniform within zone; elevation:

- Zone A: Uniform within zone
- Zone A99: Uniform within zone
- Zone AR: Uniform within zone
- Zone VE: Uniform within zone

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

Due to changes due to annexations or de-annexations, the boundaries of the Flood Insurance Study report may have been adjusted to conform to these new jurisdictions. These differences do not affect the accuracy of this FIRM.

Boundaries of the Floodway Data tables should be used for construction and/or floodplain management in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management in the Flood Insurance Study report for this jurisdiction.
