NOTE TO USERS
FEMA maintains information about map features, such as street locations and names, in or near designated flood hazard areas. Requests to revise information in or near designated flood hazard areas may be provided to FEMA during the community review period, at the final Consultation Coordination Officer's meeting, or during the statutory 90-day appeal period. Approved requests for changes will be shown on the final printed FIRM.

MAP DATES
This FIRM Index displays the map date for each FIRM panel at the time that the index was printed. Because this index may not be distributed to unaffected communities in subsequent revisions, users may determine the current map date for each FIRM panel by visiting the FEMA Map Service Center website at http://msl.fema.gov or by calling the Map Service Center at 1-800-358-9616.

Communities annexing land on adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM Index. These may be ordered directly from the Map Service Center at the number listed above.

NOTE TO USER
Future revisions to this FIRM index will only be issued to communities that are located on FIRM panels being revised. This FIRM Index therefore remains valid for FIRM panels dated (mm/dd/yyyy) or earlier. Please refer to the "MOST RECENT FIRM PANEL DATE" column in the Listing of Communities table to determine the most recent FIRM index date for each community.

NOTES TO USERS

The map was produced through the Mississippi Flood Map Modernization Initiative, a joint project of FEMA and the State of Mississippi under the National Flood Insurance Program (NFIP) to support community floodplain management efforts.

To obtain more detailed information in areas shown on the Base Flood Elevation (BFE) section, contact your local community floodplain manager. The BFEs shown on this map are based on the 1% annual chance (100-year) floodplain. The BFEs do not represent the actual floodplain elevation. The maps are intended for planning purposes and should not be used for design purposes or for individuals who may need precise flood data for construction or disaster relief.

To obtain more detailed information, individuals should contact their community floodplain manager. The BFEs shown on this map are based on the 1% annual chance (100-year) floodplain. The BFEs do not represent the actual floodplain elevation. The maps are intended for planning purposes and should not be used for design purposes or for individuals who may need precise flood data for construction or disaster relief.

The 1% annual chance floodplain is the area subject to a 1% chance of a flood equal to or greater than or equal to the 1% annual chance floodplain elevation in any year. The 1% annual chance floodplain elevation is the elevation at which a 1% chance of a flood occurring in any given year.

Some communities are subject to additional flood hazards, such as mudslides, landslides, floods, etc., which may require additional planning and design considerations.

The 1% annual chance floodplain elevation is the elevation at which a 1% chance of a flood occurring in any given year.

Other flood hazard areas include:

- The 1% annual chance floodplain elevation is the elevation at which a 1% chance of a flood occurring in any given year.
- Areas subject to special flood hazards, such as snow and ice, are subject to the 1% annual chance floodplain elevation. These areas may require additional planning and design considerations.
- The 1% annual chance floodplain elevation is the elevation at which a 1% chance of a flood occurring in any given year.
- Areas subject to special flood hazards, such as snow and ice, are subject to the 1% annual chance floodplain elevation. These areas may require additional planning and design considerations.
- Areas subject to special flood hazards, such as snow and ice, are subject to the 1% annual chance floodplain elevation. These areas may require additional planning and design considerations.

The 1% annual chance floodplain elevation is the elevation at which a 1% chance of a flood occurring in any given year.

The 1% annual chance floodplain elevation is the elevation at which a 1% chance of a flood occurring in any given year.

Areas subject to special flood hazards, such as snow and ice, are subject to the 1% annual chance floodplain elevation. These areas may require additional planning and design considerations.

Areas subject to special flood hazards, such as snow and ice, are subject to the 1% annual chance floodplain elevation. These areas may require additional planning and design considerations.

Areas subject to special flood hazards, such as snow and ice, are subject to the 1% annual chance floodplain elevation. These areas may require additional planning and design considerations.
