SUFFIX 32
2290000 FT
746000 mE
2295000 FT

CONTACT THE
INSURANCE PROGRAM in general, please call
1-877-FEMA MAP
(1-877-336-2627) for an
overview map of the county.

If you have
additional flood hazard information.

Verify current corporate limit locations.

To obtain more detailed information in areas where
no Base Flood Elevations determined, users are encouraged to consult the Flood Profiles and
Floodway data for special flood hazard areas identified in the FIRM for this jurisdiction.

Need to know if flood elevations for this jurisdiction.

1% annual chance flood.

No Base Flood Elevations determined.

Special Flood Hazard Area formerly protected from the 1% annual chance flood by
structural and/or natural barriers.

Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations
typically range from 0 to 1 foot.

Other Flood Areas

These flood elevations must be compared to structure and ground elevations referenced to
vertical datum.

Legend

Other Areas

Also determined to be in 1% annual chance flood zones but have not been
protected from flood hazards.

Areas protected by levees from 1% annual chance flood.

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

Important: Special Flood Hazard Areas are areas designated in a community to require
FHA mortgage insurance. This does not necessarily identify all areas subject to flooding,
particularly from local drainage sources of floodwater.

The map supports other flood insurance requirements in addition to
properties located within Special Flood Hazard Areas.

Special Flood Hazard Areas in Zone A

This action includes the 1% annual chance floodplain (Note: previous flood elevations
may be lower.)

Features for non-structural flood hazard mitigation:

No structural protection.

For additional flood insurance requirements, see Flood Insurance Study report should be utilized in conjunction with the FIRM for purposes of construction and/or
adaptation.

The Flood Insurance Study report for information on flood control structures for this jurisdiction.

Pertinent floodway data are provided in the Flood Insurance Study report for this
jurisdiction.

The floodplains and floodways that were
shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were
shown on this map, please contact the Information Services Branch of the National
Geodetic Survey at
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

The National Geodetic Survey website at http://www.ngs.noaa.gov/

The Flood Profiles and
Floodway data are provided in the Flood Insurance Study report for this
jurisdiction.

To be determined based on the training of surveyors.

Map Index

For community flood hazard, for use in selecting properties for special flood
hazard mapping.

Legend

Special Flood Hazard Areas

Other Flood Areas

Floodway Areas in Zone AE

Zones of risk are shown on the map.

Other Areas

Base Flood Elevations shown on the map are based on the best data available at the time of
publication. They may not reflect current conditions.

FIRM Map Information

The maps may not be used for development purposes where the results will be conveyed
in the form of data or measurements. The maps may not be reproduced without the
consent of the Secretary of the Department.

To determine flood elevation information in areas with Base Flood Elevations, please consult the
Flood Insurance Study report for this jurisdiction.

To determine flood elevation information in areas without Base Flood Elevations, the "No
Base Flood Elevations Determined" Special Flood Hazard Area formerly protected from the 1% annual chance flood by structural and/or natural barriers.

The floodway is the channel of a stream plus any adjacent floodplain areas that must be
kept free of obstructions. Special Flood Hazard Areas are defined in the National Flood
Insurance Program as areas of 1% annual chance flood risk. These areas are identified on
community floodplain maps.

Region 6, U.S. Census Bureau. This information was photogrammetrically
processed using maps of the same
scale as the 1874 and 1875 editions of the U.S. Geological Survey National Topographic System.

The flood elevation reference marks on the map not only define the flood elevation, but
also the Bureau's floodplain boundary. The elevations are referenced to a vertical datum.

Base Flood Elevations are shown on the map.

Note: for areas shown as dry areas in floodplains (1% annual chance flood areas), no flood elevations are determined. These areas are normally located within or adjacent to Special Flood Hazard Areas.

Only to show the layout of map panels; community map repository addresses; and a listing of
the panels on which each community is located.

Please refer to the separately printed report for information on flood control structures for this jurisdiction.

These flood elevations must be compared to structure and ground elevations referenced to
vertical datum. Elevation Reference Marks shown on the map not only define the flood elevation, but also the Bureau's floodplain boundary. The elevations are referenced to a vertical datum.
