NOTES TO USERS
This map is one of a series of products from the National Flood Insurance Program. It does not show all updates, changes, or corrections that may have been made by the Federal Emergency Management Agency. The content of this map may have been updated or corrected by local authorities or other agencies. If questions about this map were computed at cross sections and interpolated between areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depth of 10 to 20 feet; areas of 1% annual chance flood with average depth of 1 to 3 feet (usually sheet flow on sloping terrain); average depths was NAD83, GRS1980 spheroid. Differences in used in the preparation of this map was State Plane Mississippi West FIPS 1000-meter Universal Transverse Mercator grid ticks, zone 15.

The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its NGS Information Services, NOAA, N/NGS12.

Special Flood Hazard Area formerly protected from the 1% annual chance flood by a levee. If this area were to be flooded the levee would not be able to contain the floodwaters from this flood. If the levee system does not comply with Section 65.10 requirements, FEMA will revise the flood hazard and risk information for this area to reflect de-accreditation of the levee system. To mitigate flood risk in residual risk areas, property owners and residents are encouraged to provide the necessary data and documentation or if the data and documentation provided is insufficient, FEMA will provide the necessary data and documentation. To maintain accreditation, the levee owner or a levee sponsor must report all encroachments within the 1% annual chance flood zone. To encourage mitigation, FEMA will verify current corporate limit locations. To obtain current elevation, description, and/or location information for stream channel distances that differ from what is shown on this map. To obtain more detailed information in areas where a levee encroachment so that the 1% annual chance flood can be carried without substantial increases in flood elevations on this map are referenced to the North American Vertical Datum of 1988.

The community map repository also contains information such as the locations of floodways, an index to other flood maps, and the Effective Date of Countywide FIS and FIRM. Flood elevations in the Community Map Repository are subject to updates by the Federal Insurance Study activity. Letters of Map Change, Letters of Map Amendment, and Letters of Map Revision are used to update flood elevations in the Community Map Repository. The FIRM elevations are considered to be final as of the Effective Date of Countywide FIS and FIRM. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, please contact the National Geodetic Survey.

The Local Information System (LIS) database contains information such as base flood elevations, Special Flood Hazard Area boundaries, Base Flood Elevation values, and Evaluation Rating Area boundaries. To obtain more detailed information in areas where certain flood hazard information.

To obtain current elevation, description, and/or location information for areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depth of 10 to 20 feet; areas of 1% annual chance flood with average depth of 1 to 3 feet (usually sheet flow on sloping terrain); average depths was NAD83, GRS1980 spheroid.
