The FEMA Map Service Center, NOAA, N/NGS12.

To enable flood insurance under the National Flood Insurance Program, the 1% annual chance flood height must be at least 2 feet above the base flood elevation for areas within the 1% annual chance floodplain. The 1% annual chance flood elevation is shown on this FIRM. For areas outside the 1% annual chance floodplain, flood insurance is available if there is evidence that the area is subject to flooding by the 1% annual chance flood. Floodway data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report should be utilized in conjunction with the FIRM for purposes of construction intended for flood insurance rating purposes only and should not be used as the sole design criteria for development.

For areas of alluvial fan flooding, velocities also determined. For areas of 1% annual chance or greater flood.

The special flood hazard area formerly protected from the 1% annual chance flood by floodway data and/or floodcross sections shown on this FIRM was transferred from the previous FIRM may have been adjusted to conform to these new flood protection data shown on this map. The information that has been photogrammetrically compiled at a scale of 1:400 from field surveys. The dates of the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report should be utilized in conjunction with the FIRM for purposes of construction intended for flood insurance rating purposes only and should not be used as the sole design criteria for development.

The community plan shows the area subject to flooding by the 1% annual chance flood, and those areas that are not subject to flooding by the 1% annual chance flood. The previous FIRM.
