NOTES TO USERS

Two maps are to accompany the National Flood Insurance Program. A map, the Flood Insurance Study (FIS), forms the basis of the National Flood Insurance Program. A map, the Federal Insurance Rating Map (FIRM), is used by users to determine the 1% annual chance flood and BFEs.

To obtain more detailed information in areas where 6000000 FT for community number 6, visit the FEMA website at 1-877-FEMA MAP (636-2672). Note that the map is intended to be a source of information for flood heights.

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of obstructions in order to function properly as an effective floodway. The floodway should be free from any encroachments, debris, or obstructions.

On the FIRM, flood profiles show the layout of map panels. Data tables of FIRMs for adjacent jurisdictions may result in slight positional differences in map locations. This map was produced through the Mississippi Flood Map Modernization Initiative, a cooperative partnership between the State of Mississippi and the Department of Homeland Security - Federal Emergency Management Agency.
