This is a map produced through the Mississippi Flood Map Modernization Project. The map shows the following:

- **Areas of 0.2% annual chance flood:** areas of 1% annual chance flood with average flood depths of less than 1 foot or drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

- **Areas of 1% annual chance flood:** areas subject to a 1% annual chance flood event by a Federal flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance flood event.

- **Areas to be protected from 1% annual chance flood event by a Federal flood control system:** areas subject to a 1% annual chance flood event by a Federal flood control system that was subsequently decertified.

- **Base Flood Elevations determined:** elevation in feet above North American Vertical Datum of 1988 (NAVD 88). Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, users are encouraged to consult the Flood Insurance Study report (which contains Base Flood Elevations, flood depths or flood velocities).

- **Coastal flood zone with velocity hazard (wave action):** Base Flood Elevations are determined for the 1% annual chance flood event, and flood depths for coastal flood zone with velocity hazard (wave action) are provided for this jurisdiction.

- **Coastal flood zone without velocity hazard (wave action):** Base Flood Elevations are determined for the 1% annual chance flood event, and flood depths for coastal flood zone without velocity hazard are provided for this jurisdiction.

- **Floodway boundary:** floodway widths are determined based on hydraulic considerations with cross sections showing the floodways.

- **0% Base Flood Elevations determined:** elevation in feet above National Geodetic Vertical Datum of 1929. These elevations are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information.

- **0% Floodway Data tables:** floodway data tables are provided in the Flood Insurance Study report for this jurisdiction.

- **Spatial Reference System:** the National Spatial Reference System (NSRS) uses the World Geodetic System 1984 (WGS 84) as a global reference frame. The North American Datum of 1983 (NAD 83), which is a representation of the Earth’s surface, is used for this map. The North American Vertical Datum of 1988 (NAVD 88) is used for flood elevation information.

- **Notice to User:** The information provided on this FIRM is intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, users are encouraged to consult the Flood Insurance Study report (which contains Base Flood Elevations, flood depths or flood velocities).

- **Notice to User:** The floodway data tables are provided in the Flood Insurance Study report for this jurisdiction.

- **Notice to User:** For community map revision history prior to countywide mapping, refer to the Community Map Revision History Table located in the Flood Insurance Study report for this jurisdiction.

- **Notice to User:** To determine if flood insurance is available in this community, contact your insurance agent or call FEMA at 1-800-358-9616. To obtain current information about flood hazards in this community, contact your local floodplain manager or visit the FEMA website at http://www.fema.gov/business/nfip/.
