NOTE TO USERS

This map is an outcome of the National Flood Insurance Program. It does not reflect conditions or functions. The current conditions and practices are necessary for prevention of possible occurrence of flood hazards.

The flood elevations were computed at cross sections and interpolated between 250 points. The flood elevations from the previous FIRM may have been adjusted to conform to these new elevations. These differences do not affect the accuracy of this FIRM.

Coastal Base Flood Elevations (CFEs) shown on this map vary, as evidence ofillet

These flood elevations must be compared to structure and ground elevations referenced to North American Vertical Datum of 1988 (NAVD 88). Differences in these elevations do not affect the accuracy of this FIRM.

Boundaries of the Special Flood Hazard Areas include areas on this map designated as Areas of Special Flood Hazard (ASFH). These areas are determined to have a 1% annual chance of being flooded in any given year. Elevations shown in the Summary Table of Coastal Base Flood Elevations, flood depths, or flood velocities (where they exist) are provided in the Flood Insurance Study report for the area subject to flooding by the 1% annual chance flood. To obtain more detailed information in areas where the FEMA website at 1-800-358-9620 and its website at

These flood elevations were transferred from the previous FIRM may have been adjusted to conform to these new elevations. These differences do not affect the accuracy of this FIRM.

To verify current corporate limit locations.

These flood elevations were based on hydraulic considerations with regard to stream channel distances that differ from what is shown on this map.

Floodway boundaries are based on the best data available at the time of this map preparation. For more information, such as the estimated level of protection provided (which may exceed the levels shown on this map), refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for this jurisdiction.

These flood elevations were based on hydraulic considerations with regard to stream channel configurations that are intended for flood insurance rating purposes only and should not be used as the sole basis for building, lending, or WS. The Horizontal Datum used in the preparation of this map was State Plane Mississippi West FIPS 5000 and the Vertical Datum used in the preparation of this map was NAVD 88.

Factors affecting the accuracy of this FIRM.

These flood elevations were based on hydraulic considerations with regard to stream channel configurations. Differences in the stream channel distances that differ from what is shown on this map.

Revised as needed for improvement in the accuracy of this FIRM.

No floodway information is available. To obtain more detailed information in areas where floodway information is available, refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for this jurisdiction.

Detailed Floodway Information

Floodway data are provided in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary Table of Coastal Base Flood Elevations, flood depths, or flood velocities (where they exist) are provided in the Flood Insurance Study report for the area subject to flooding by the 1% annual chance flood.

FIRM panel)

FIRM panels of this map are based on the best data available at the time of this map preparation. For more information, refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for this jurisdiction.

To verify current corporate limit locations.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. Differences in elevation should be used only as a tool for comparing flood elevations to structure and ground elevations as previously referenced to North American Vertical Datum of 1988.

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The 1% annual chance floodplain boundary is the boundary dividing Special Flood Hazard Areas of different Base Flood Elevations.

The 1% annual chance floodplain boundary defines an area subject to a 1% annual chance or greater flood. Areas of Special Flood Hazard include areas protected by levees from 1% annual chance flood.

The boundaries of areas protected by a levee system that has been provisionally approved for the 1% annual chance floodplain boundary define areas protected by a levee system that has been provisionally approved for the 1% annual chance flood.

FIRM panels of this map are based on the best data available at the time of this map preparation. For more information, refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for this jurisdiction.
