NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not depict the map area boundary. The map area boundary is determined by the Federal Emergency Management Agency.

ANNOTATION

Zone AE

Exposed to the flood hazard designated as A.

Floodway Data.

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of structures (other than those floodway structures approved by the Federal Emergency Management Agency). Zone AE identifies floodways that are subject to the floodway restrictions of the National Flood Insurance Program. Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that the elevation information provided by these tables may have been determined, users are encouraged to consult the Flood Profiles and Summary of Stillwater Elevations tables contained within the Flood Insurance Study report for the county.

Coastal Flood Elevations (BFEs)

Coastal flood elevations are provided in the coastal flood zone with velocity hazard (wave action). These flood elevations must be compared to structure and ground elevations referenced to the North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table located in the Flood Insurance Study report for this jurisdiction. Zone AE identifies floodplains subject to the coastal flood hazard. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey SSMC-3, #9202 Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988. These flood elevations should be utilized in conjunction with the FIRM for purposes of construction and/or development.

Boundaries of the Floodway data should be used in conjunction with the Flood Profiles and Summary of Stillwater Elevations tables located in the FIRM to administer the National Flood Insurance Program. For an overview map of the county, please refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for this jurisdiction. Floodway widths and other requirements of the National Flood Insurance Program. Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report should be utilized in conjunction with the FIRM for purposes of construction and/or development.

Zone A99

Identifies the area of risk associated with the former flood control system that was subsequently decertified. Zone A99 indicates that the former flood control system is being restored to provide protection from the 1% annual chance flood.

Zone AR

Identifies an area in which a flood control system under construction; no Base Flood Elevations determined.

Zone AH

Identifies an area in which a flood control system under construction; Base Flood Elevations determined.

Zone A

Identifies the area of risk associated with the former flood control system. For an overview map of the county, please refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for this jurisdiction. Floodway Data and/or Summary of Stillwater Elevations tables located in the FIRM to administer the National Flood Insurance Program. Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report should be utilized in conjunction with the FIRM for purposes of construction and/or development.

Zone AO

Identifies the area of risk associated with the former flood control system. Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study report for the county.

Zone AO1

Identifies the area of risk associated with the former flood control system.
